

Jumping Frog Puzzle

Cut out the frogs above (or get an adult to help)
Place the yellow chested frogs on lily pads 1,2 and 3
Place the green chested frogs on lily pads 5,6 and 7

The object of the puzzle is to swap the positions of the yellow chested frogs and the green chested frogs. So to win, there should be yellow chested frogs on pads 5,6 and 7 and green chested ones on 1,2 and 3.

The yellow chested frogs can only jump to the **right**. You can only move them onto an empty lily pad or they can jump over only **one** other frog to get to the empty lily pad.

The green chested frogs can only move to the **left**. Again they can only move one jump onto an empty lily pad or jump over **one** frog to get there.
