

# Santa's Wonder Puzzle

Cut out the game pieces above (or get an adult to help) so that you end up with 9 cards, each with coloured corners.

The object of the puzzle is to shuffle the pieces and then lay them out in a 3 by 3 grid pattern (as above) so that the each corner does not touch another corner of the same colour (without looking at the solution shown above!!).

This game is a variant of a puzzle called "Grandpa's Wonder Puzzle" patented by A.K Rankin in 1911 and used to advertise "Grandpa's Wonder Soap".
